WORK EXPERIENCE

Luno, Software Engineer, Web

February 2023—Present, Full-time

Manage and develop rewards products and services. Led a small team to implement the new company's design system and built over 30+ web components using Angular and its ecosystem.

Rock, Frontend Engineer

September 2021—January 2023, Full-time

Helped develop new features for the web and desktop client. Working remotely from Jakarta with teams from US, India, and Europe. Working extensively with Vue and TypeScript.

- → Developed Pinboard, a new feature for space admin to be able to pin messages and objects for future references in a mini app
- → Developed credits and referral programs for affiliated users
- → Developed task imports/exports feature to give the ability to users migrate their task board
- → Developed Slack import to easily migrate messages from Slack
- → Developed user's status and indicator when users are online
- → Developed Loom integration to be able to send screen recordings within the app
- → Developed feature to send GIFs images and reactions
- → Developed link previews in the chat message

Bukalapak, Software Engineer, Frontend

October 2017—October 2021, Full-time

Involved in Core User team. Taking care of millions of Bukalapak users. Scopes include: leveling up user safety with two-factor authentication, login and register page, and password resets. Bukalapak employs a micro frontend architecture implemented with Vue and Node.js.
